

Oil filtration

## Hengst Filtration is series supplier for new DAF series

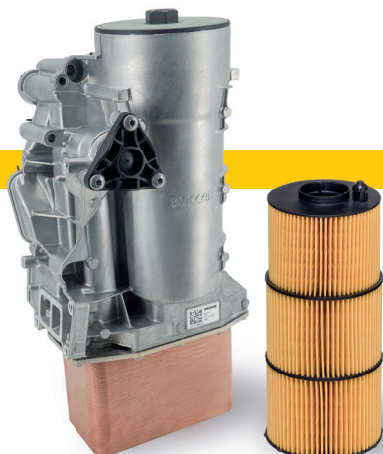

DAF is heading for the future - and Hengst Filtration is on board as a development partner and series supplier! With the XF, XG and XG+ vehicle generation, the manufacturer wants to set new standards in efficiency, driver comfort and safety. Our fluid management module for the Euro 6 engine series MX-11 plays a large role in this. It has a connecting flange for the crankcase ventilation and is characterised by its long-life option, the integrated oil thermostat and the high cooling capacity.

Energy efficiency is a particular focus for this generation of vehicles. We at Hengst were happy to take up this challenge when developing the filtration module. Thus, the patented Energetic® oil filter system contributes to reduced CO<sub>2</sub> emissions.

The **Energetic® 7 oil filter E829H D366** is used as a standard component in the following DAF commercial vehicles:

- ✓ DAF XG, XG+
- ✓ DAF XF II
- ✓ DAF XDC, XFC
- ✓ DAF CF

The OE part number is DAF **2253989**.
