

We have the best customers in the world.

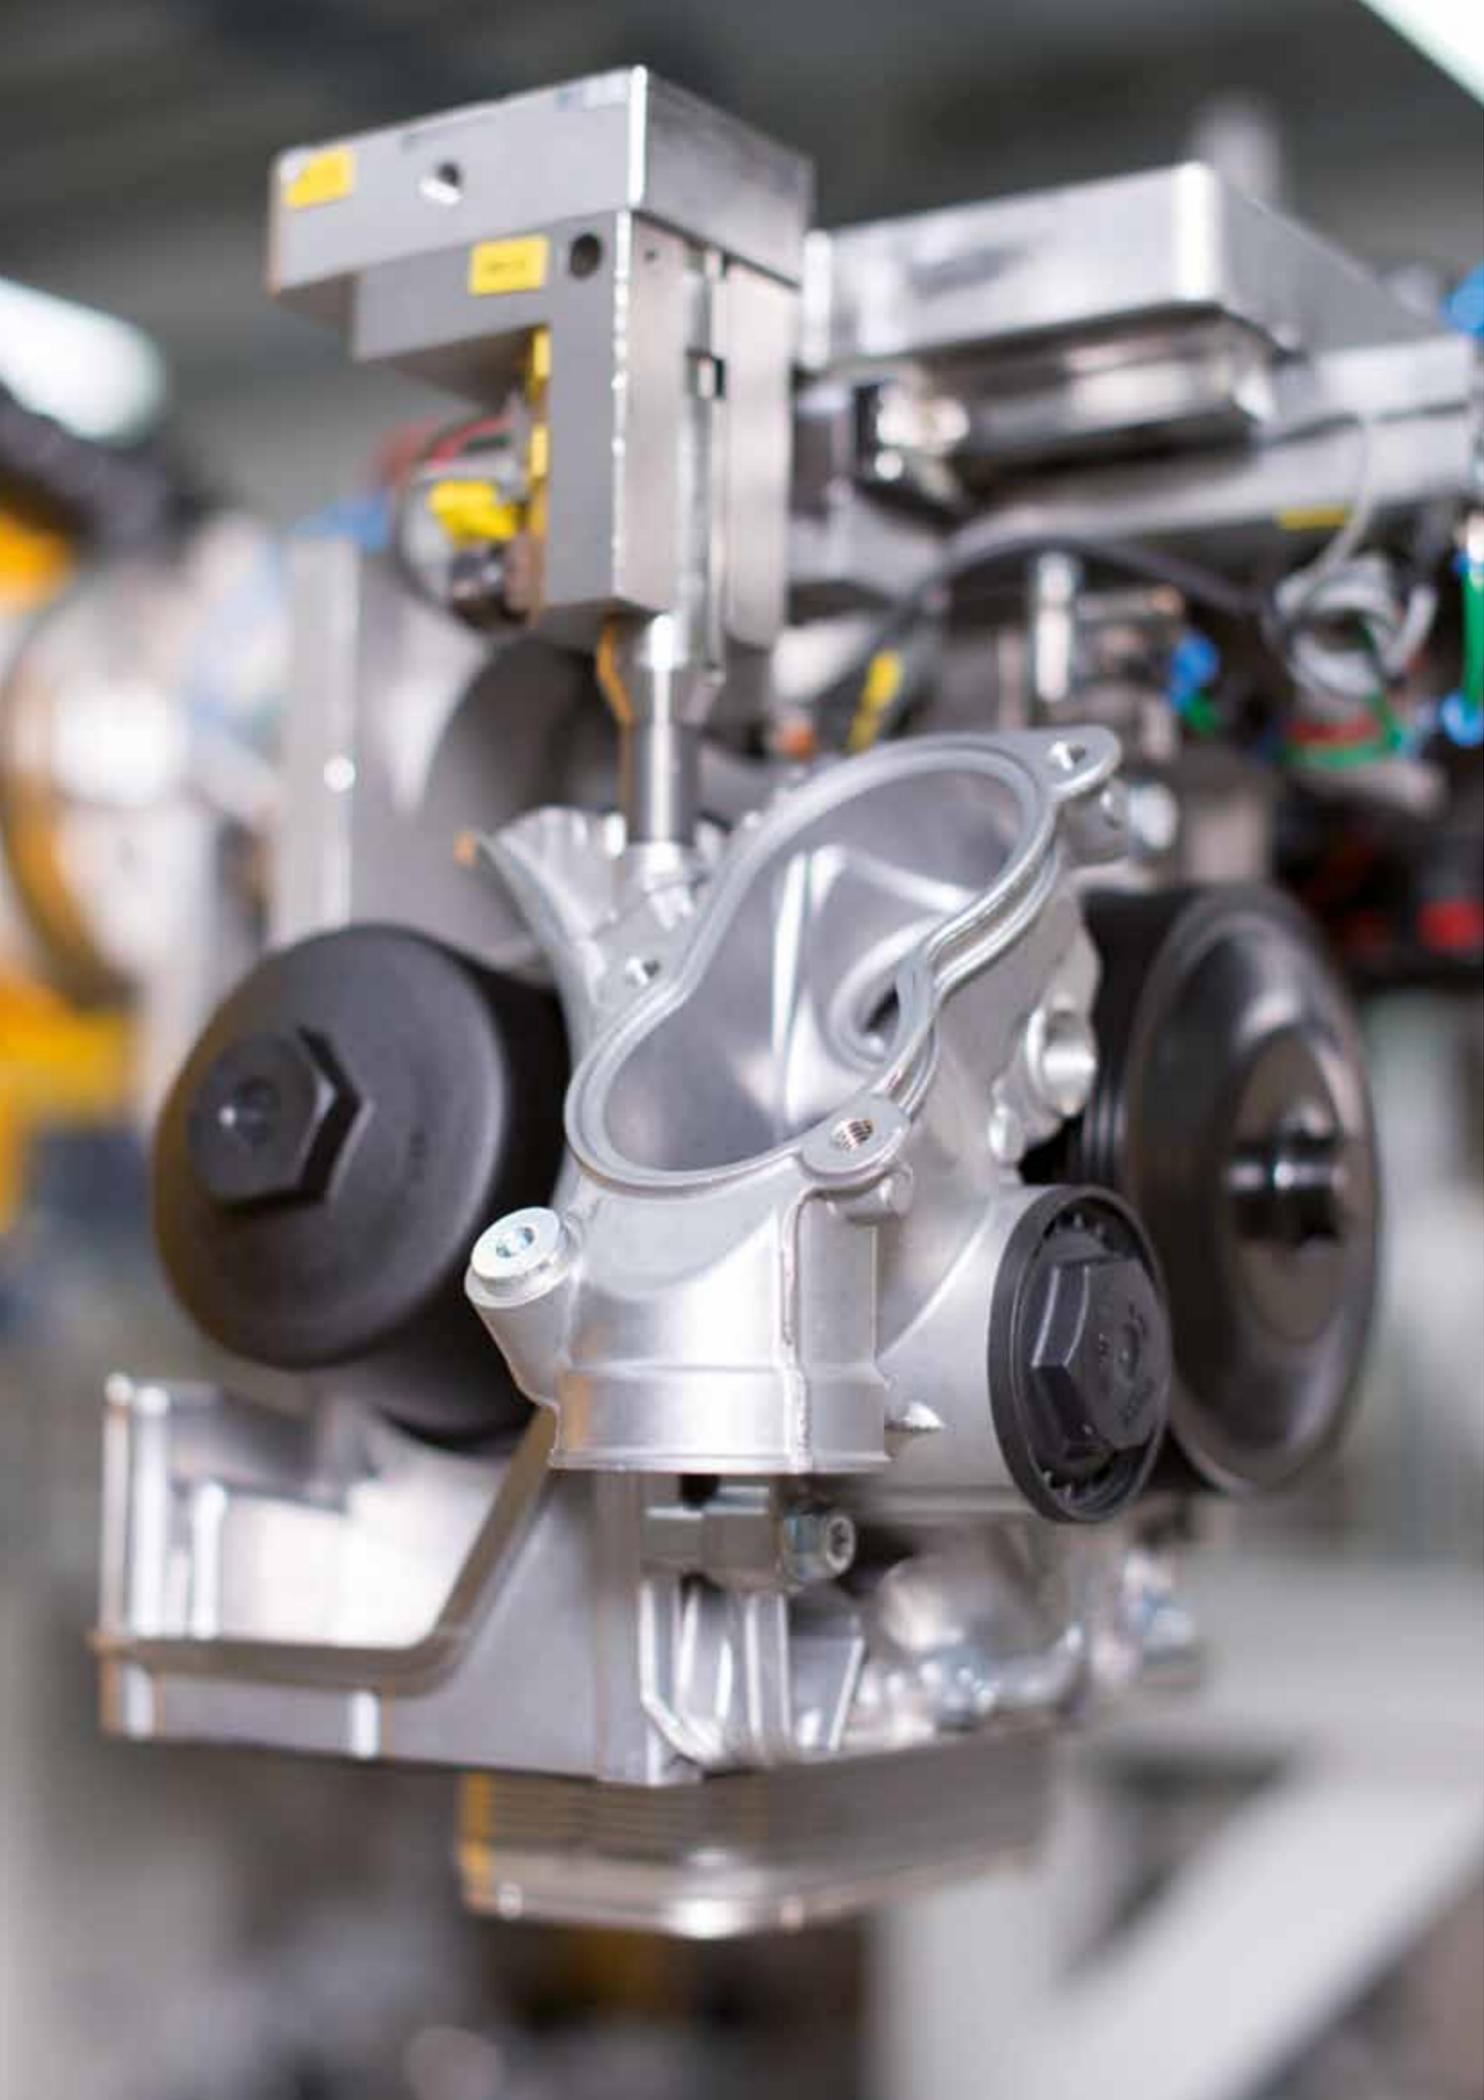

H is for heart and soul.

Here you see two employees of the Hengst Group. They represent around 3,000 people who do their utmost for us every single day and whom we have to thank for the fact that we have been able to successfully demonstrate our expertise in filtration for more than half a century. From the very outset, we have developed and manufactured filtration and fluid management solutions for some of the biggest names in automobile and engine manufacturing, as well as a wide range of industrial applications. We have grown to the task, quite literally, by becoming

an international supplier with customers in all corners of the world. Although the German city of Münster remains the home of the Hengst Group, and the place where all paths cross, we have for many years had our eyes firmly on the horizon. We were practically born with a striving aspiration to grow and expand and now have eleven locations in seven countries on four continents around the globe. The Hengst Group has continued to develop itself strategically and establish itself in the global market, and has always done so true to the motto: if it works, take it, if it doesn't, leave it.

Your engine is what drives us.

We are in our element when it comes to horsepower. It's not just because of our name: Hengst (German for "stallion"), but also because we have established a name for ourselves as a supplier to famous automobile and engine manufacturers. It is for them that we develop high-end, engine-optimizing fluid management and crank case ventilation systems for passenger and commercial vehicles. As a developer, manufacturer, and OEM/OES supplier, we tick all the boxes when it comes to producing high-end solutions that are tested from top to bottom. One of our foremost strengths is

Filtration and fluid management: a science in its own right and one in which we excel.

making things small and light. Developing multifunctional filtration and fluid management modules means uniting maximum performance with minimum size and weight, and that is what we do best thanks to our wealth of expertise, experience, and – above all – passion. But we never lose sight of the bigger picture, which means our solutions also fulfill requirements such as ease of installation, enabling productivity to be optimized and costs reduced. We firmly believe in the principle that nothing is impossible, and that is what motivates us every single day.

Original means always being one step ahead.

An inherent aspect of originality is the fact that no one else is like you. And that in itself makes the Hengst filter brand unique in the global independent aftermarket. We have built up an astounding reputation for being able to supply high-quality, high-performance OEM filtration solutions for almost all of the world's passenger and commercial vehicles. Our exceptional standing is well deserved as we are always at the forefront of development and provide cutting-edge products and services around the globe. As an OEM and development partner for some of the biggest names in the automobile industry, we always aim to turn the best ideas into the

Full range of products in OEM quality.

highest quality products. It therefore comes as no surprise that we are always a good step ahead of the rest, thanks to our unique brand quality as well as our comprehensive product and material expertise in the aftermarket.

From traditional filter sets and lifetime-proof filter casings to sophisticated special applications – you will find that we provide a complete range of service components defined by consistently high premium quality. And where else if not in filtration products does the adage apply that it's the little differences that put original parts ahead of the rest. At Hengst Filter we like to call it "the finest quality".

Filtration without vehicles.

Filtration has long been the workhorse that drives Hengst from strength to strength. Thanks to this core expertise in vehicles, we did not have to reinvent the wheel when it came to conquering other markets with our high-performance solutions. Today you can find our filtration and fluid management solutions in many areas of industrial and environmental technology. It's not just the big-name manufacturers of cleaning appliances and electrical tools that rely on Hengst's top-grade filter elements. Large-scale industrial plants and powerful agricultural and construction machines are also fitted with our products

to protect them reliably during operation. Our products are also used in air conditioning, heating oil filtration, and combined heat and power plants, as well as in decentralized energy generation. These areas of use are as diverse as the products that we develop for them. Common to all of our products is the fact that they fulfill every requirement for product, process, occupational, and environmental protection, and that they provide a special level of customer benefit when it comes to quality and performance – even, or particularly, when used under extreme conditions and for long periods of time.

Westphalian and worldwide.

When it comes to being close to our customers, we take things very literally – and we know no limits. With eleven locations in seven countries on four continents, we can provide our customers with proverbial German engineering quality anywhere in the world, without time delays or language barriers. That is advantageous to them not only in terms of fulfilling local content clauses, but also because we are so fast and flexible as a result, and best placed to understand and implement local requirements in each country. Examples of this are statutory regulations, carbon emission limits, and nationally imposed

technical production requirements. However, no matter how cosmopolitan and globally networked we may be, we have always remained true to our roots. Firstly, because we have always focused consistently on our core expertise in filtration and fluid management, and secondly, because when it comes to our international and strategic orientation, all the threads of our corporate group still converge at our headquarters in the German region of North Rhine Westphalia. Westphalian and worldwide means being aware of our origins and history while striving for new horizons every day.
