Press release: Hengst presents groundbreaking solutions at the 2016 IAA

July 2016

Intelligent Fuel Filtration

Hengst presents groundbreaking solutions at the 2016 IAA Commercial Vehicles

An idea to spark optimized performance: The Blue.maxx modular system from Hengst is setting benchmarks in diesel fuel filtration. Hengst will present the concept with other solutions for filtration and fluid management in commercial vehicles at the **2016 IAA** (Hanover, **September 22-29, 2016, Hall 13 Stand C23**) – true to the fair's motto "Driven by Ideas."

Maximum reliability and efficiency under ever stricter emission regulations: The requirements placed on fuel filtration in commercial vehicles are growing rapidly. Hengst engineers no longer want to consider pre-filters and main filters separately, but as a multi-stage, fine-tuned system. The Blue.maxx concept combining pre-filters and main filters will have long-term advantages: significant improvements in particle filtration, water separation, and differential performance along with a reduction in the required installation space. Tailored to the respective situation, the filter stages can be defined for any application.

With its range of products, Hengst efficiently and reliably covers all filtration and fluid management requirements in commercial vehicles. In addition to its Blue.maxx system, the company will also present other solutions including those for crankcase ventilation and concepts for the "drive of tomorrow" at the 2016 IAA.

Hengst has placed a focus on developing pre-filtration and main filtration together as a fine-tuned system, achieving additional surprising gains in performance.
