

New in the range

Maximum performance and durability.

**Crankcase ventilation
for passenger cars and
commercial vehicles**

purifying our planet

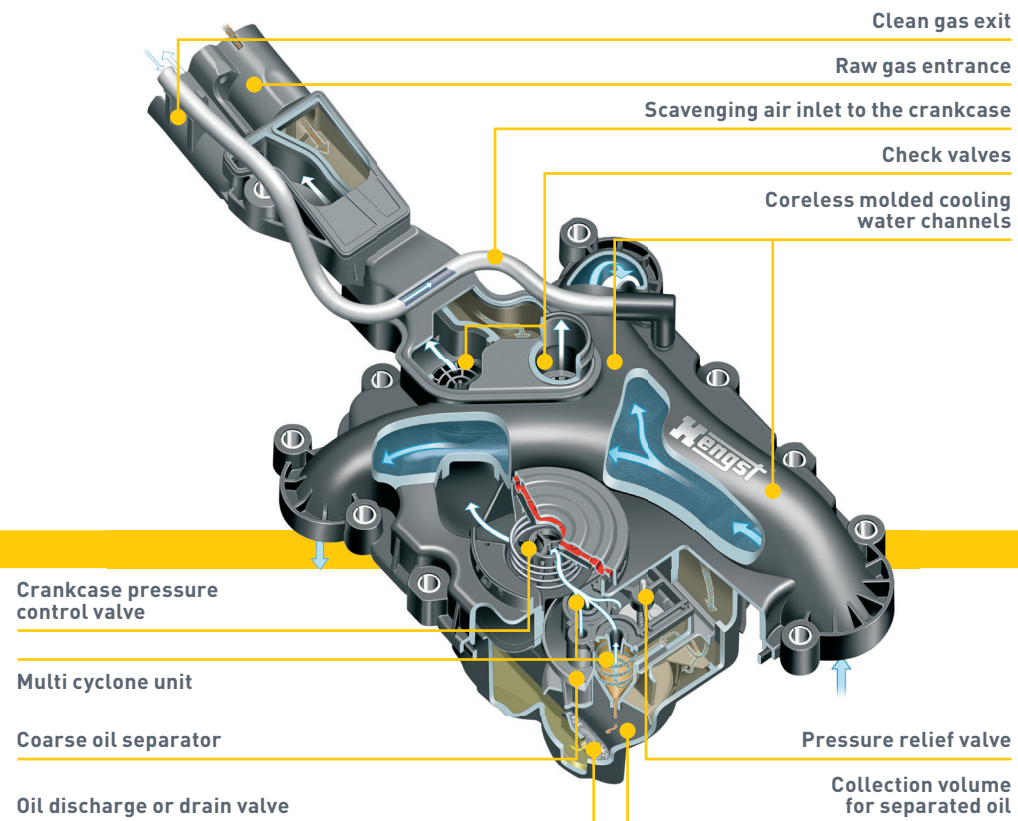

What are crankcase ventilation systems?

Blow-by gases are produced during the compression and combustion of the fuel-air mixture in the engine. These gases contain impurities such as oil droplets, water vapor, soot and fuel residues. In the treatment of these gases crankcase ventilation plays a key role in the treatment of these gases. It removes these gases from the crankcase, which would otherwise be released into the environment. These gases are then routed via the engine-side add-on parts, where they are cleaned by a separator unit.

After cleaning, the gases are fed back into the intake air. If the separator unit of the crankcase ventilation is defective, oil particles can contaminate the throttle valve, the intake manifold and the turbocharger, for example. As a result, the contaminated intake air leads to a reduction in engine performance, which is particularly noticeable in poor acceleration behavior and a rough idle.

If the malfunction of the crankcase ventilation remains unnoticed for a longer period of time, for example because the vehicle is mainly driven in city traffic without significant acceleration, oil residue can be deposited on valves, piston rings, in the turbocharger and on cylinder walls. This can significantly increase fuel consumption, further reduce engine performance and, in the worst case, lead to engine damage if the components have already been severely affected.

Regular maintenance and inspection of the system is therefore essential to maintain engine performance.

Crankcase ventilation systems in original equipment quality.

We use our expertise as an original equipment manufacturer for a wide range of product groups to now also offer these in the independent aftermarket. Naturally in the usual OE quality and with the best possible service for our customers!

System

Crankcase ventilation

Application

VW EA888 Gen3 | e. g. Audi A4, VW Golf

Properties

- Cylinder head cover-mounted system with cyclone and pressure relief valve
- Integrated pressure control
- Non-return valves for full-load and partial-load ventilation
- OBD-capable hose connection

IAM Type

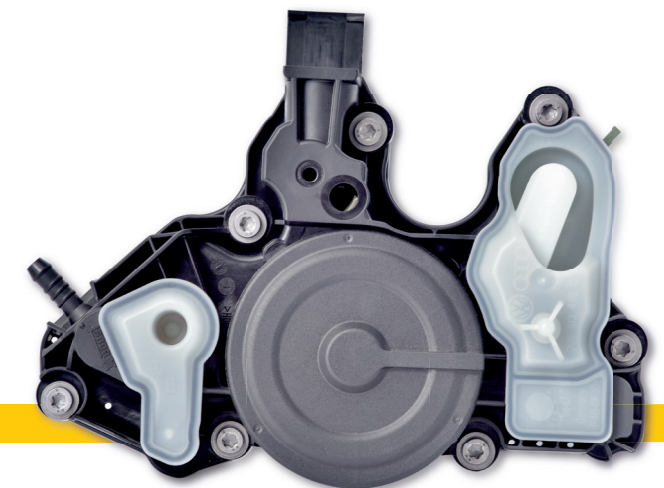

AS371M05

HENGST.garage

Watch the YouTube video about the new products in the HENGST.garage.

Kai presents our new crankcase ventilations there.

Maximum performance and durability. Your customer benefits at a glance:

Advantages:

- Extensive expertise thanks to in-house production of oil mist separators
- High delivery performance for all products
- Product range covers the majority of relevant European car and commercial vehicle models and is constantly being expanded
- Patents for the Blue.tron electric disk separator and other passive oil mist separators
- Established brand in the aftermarket

Crankcase ventilation systems for passenger cars & commercial vehicles.
